| <b>NAME:</b> NAMAGANDA BARBRA           | <b>AGE:</b> 40yrs | <b>SEX:</b> F | <b>DATE:</b> 01.05.2021 |
| <b>CLINICAL NOTES:</b> Abdominal pain.  |                   |               |                         |
| <b>EXAMINATION DONE:</b> abdominal scan |                   |               |                         |

The liver has a well-defined echogenic mass in the left lobe measuring 2.58 x 2.59cm in dimensions. The rest of the liver parenchyma appears normal in echopattern and echogenicity (Liver = 12.14cm MCL).

Porta hepatis is clear. The porto-venous system appears normal.

Both kidneys are normal in size, shape and echopattern. The collecting systems are normal. Right kidney = (8.17 x 3.95) cm and left kidney = (8.60 x 4.44) cm

The pancreas and spleen (8.26cm) are normal. The gall bladder appears to be distended with a width of 5.28cm however no sludge seen. The biliary ducts appear normal.

The bowel loops show normal thickness and distension. Peristalsis is of normal pattern. No bowel masses seen. There is no ascites and no enlarged abdominal lymphnodes

The urinary bladder is not distended.

## Conclusion

Findings are suggestive of:

- Echogenic left lobe hepatic mass (DDx; hepatic hemangioma, HCC)
- A biopsy is advised
